```
A measured run on this testbed:
- workload=bulk cc=cubic qdisc=pfifo_deep
  rtt=40ms loss=0.5% bw=50Mbit buf=ample
  -> goodput_mbps=4.803 retransmits=21
     cwnd_mid=18 srtt_mid_ms=40.259

Now exactly one knob changes:
`cc` goes from cubic to bbr.
Predict the effect on goodput_mbps ...

model, 5 samples at temperature 0.8:
 {"direction":"increase","ratio":3.41}
 {"direction":"increase","ratio":4.78}
 {"direction":"increase","ratio":5.85}
 {"direction":"increase","ratio":7.16}
 {"direction":"increase","ratio":4.57}

gate: 5/5 votes, median 4.78x > 1.15
 -> move to bbr   (measured: 9.7x)
```
